Corrigendum

In volume 41, issue 10 of *Communications in Statistics—Theory and Methods*, the incorrect author affiliations and table appeared in The Dynamic Model for Cancer Relapse Based on Two-Stage Model of Carcinogenesis by Lie-Jane Kao and Li-Shya Chen, pages 1701–1720. The correct affiliations and table are shown below.

LIE-JANE KAO[1] AND LI-SHYA CHEN[2]

[1]Department of Banking and Finance, KaiNan University,
Taoyuan, Taiwan
[2]Department of Statistics, National Chengchi University,
Taipei, Taiwan

Table 1
Summary statistics of relapse times for rats

μ_I	δ_0	δ_1	δ_2	Min	Q1	Median	Q3	Max	Mean	St. Dev.
−	−	−	−	3.60	226.85	326.25	419.80	690.10	323.78	136.19
−	−	−	+	3.70	235.35	358.50	479.05	789.20	352.91	166.93
−	−	+	−	14.10	274.90	349.80	435.60	719.70	358.15	120.45
−	−	+	+	6.80	304.15	392.80	493.05	770.00	394.85	136.49
−	+	+	+	1.30	297.80	395.30	473.95	816.70	391.62	131.73
+	+	+	+	2.00	195.45	268.75	319.75	516.40	247.75	112.72

Note: μ_I: "+" means 0.0000052/day, "−" means 0.0000013/day.
δ_0: "+" means 0.027945/day, "−" means 0.01863/day.
δ_1: "+" means 0.055890/day, "−" means 0.03726/day.
δ_2: "+" means 0.027945/day, "−" means 0.01863/day.
600 simulation runs are generated for the first 5 settings, respectively. While 400 simulation runs are generated for the last setting.
