

Contents

Preface	
1. INTRODUCTION	1
1.1 Concepts and Data types of Reliability Analysis	1
1.2 Electro-Explosive Device and Thermal Transient Testing	3
1.3 A Motivating Example	4
1.4 Overviews	6
2. STATISTICAL BACKGROUNDS	8
2.1 Reliability Data Analysis	8
2.2 Accelerated Experiment	10
2.3 EM-Algorithm	11
2.4 Bootstrap Methods	14
2.5 Markov Chain Monte Carlo Simulation	16
3. RwACM MODEL	19
3.1 Modeling a Degradation Measurement	19
3.2 The Linkage of Two Types of Data	22
4. MEASUREMENT SELECTION CRITERION	26

4.1 General Concepts of the <i>CCP</i>	26
4.2 The <i>CCP</i> to the Linear Degradation Model	28
5. ESTIMATION PROCEDURES	33
5.1 Frequentist Inferences	33
5.2 Bayesian Inferences	37
6. EXPERIMENTAL SETTINGS AND SIMULATION STUDIES	42
6.1 Experiment Settings	42
6.2 Simulation Studies	43
7. CONCLUSION AND FUTURE RESEARCHES	57
7.1 Conclusion	57
7.2 Future Researches	58
REFERENCES	60
