

## ACKNOWLEDGEMENTS

First, my greatest gratitude goes to my advisor, Dr. Chieh-yue Yeh, for her guidance, advice, inspiration and encouragement in the past two years. I thank her with all my heart for the great patience she showed to me during each stage of my thesis writing. Without her spending long time reading the draft of each chapter and giving me the valuable and helpful feedback and comments, this thesis would not be accomplished. Thank you, Dr. Yeh, for guiding me through this long journey.

Second, I would like to express my gratitude toward Dr. Cynthia Hsin-feng Wu, who has brought me to the threshold of doing research and taught me the knowledge and the skills. Thanks for the training she gave me when I was in ETMA, it was a very wonderful experience. Also, I would like to thank two of my committee members, Dr. Chin-chi Chao and Dr. Chen-kuan Chen, for reading my thesis thoroughly and providing me with their insightful suggestions to make my thesis better. My thanks also go to Dr. Sun-fa Su for his selflessly offering me the advice at the beginning stage of my thesis and continuously expressing his encouragement to me during these years.

Third, I want to thank the participant of this study, Bert. Without his willingness and cooperation, this research would be difficult to be started. My thanks also go to two of my friends, Fred and Wendy. I am very grateful for their mental support every time when I nearly lost my faith in completing the thesis.

Last, I would like to dedicate this thesis to my father, who is in heaven, and my mother. Without their love and unflinching support, it would be impossible for me to acquire my master degree.
