ACKNOWLEDGEMENTS

A number of individuals have been of great help to me while I was striving to go through this process.

First and foremost, I would like to express the deepest and sincerest gratitude to my dear advisor, Dr. Chi-yee Lin, for his inspiring instruction and consistent encouragement throughout my research for this work. Without his enlightening guidance, intellectual inspiration, prudent corrections throughout my research, the completion of this thesis would never have been possible.

Besides, I am deeply obliged to my committee members, Dr. Chia-yi Lee and Dr. Ming-chung Yu, for their helpful suggestions and insightful comments on the thesis in the oral defense. My gratitude is also extended to all my teachers in the Master of Arts in English Teaching program, National Chengchi University, for their professional and devoted instruction. I really leaned a lot from them.

My gratitude is extended to Mr. Wen-hung Lien and Miss Yih-chin Yang, who help me dissolve my bewilderment about statistical problems. I am also grateful to Miss Mi-ting Hsu and Yu-chun Tsai, two of my colleagues, who give me suggestion about the questionnaire and encouragement in my hardest times of research.

Finally, my warmest appreciation is extended to my family for their constant support. I would like to thank to my beloved parents and parents-in-laws, who have always been worried about me; my thoughtful husband, who shares the housework and gives me unfailing support; my sister and brother, who often support me. With their encouragement and support, I am able to go through the most difficult periods in completing the thesis.
