

THE OLD ENGLISH STRONG VERBS AND SOUND CHANGES RELEVANT TO THEM

Chien-Ching Mo
Associate Professor of Linguistics
Department of Western Languages and Literature
National Chengchi University

1. INTRODUCTION

Old English parts of speech comprise two main groupings, the strong (athematic) and the weak (thematic). As regards verbs, Old English has two types of verbs – Strong and Weak. The strong verbs form their preterit and past participle by means of ablaut. The weak verbs form their preterit by the addition of a syllable containing a dental, and their past participle by means of a dental suffix.

The Old English verb has the following independent forms:

- a. two tenses--present and preterit. Other tenses are either expressed periphrastically or are understood contextually;
- b. indicative, subjunctive, and imperative moods, in addition to infinitives and participles;
- c. two numbers--singular and plural;
- d. three persons, but only in the singular of the present and preterit indicative. All plurals and the singular of the subjunctives are the same throughout;
- e. one voice only--the active. Except for the only verb hātan, which has a passive form hätte, verbs in Old English have only an active voice.

1.1 Principal Parts of the Strong Verbs. The principal parts of a strong verb are: (1) the infinitive, (2) the preterit indicative first person singular, (3) the preterit indicative plural, (4) the past participle. Following are the principal parts of drīfan, 'drive'; bēodan, 'command'; singan, 'sing':

drīfan	drāf	drifon	drifen
bēodan	bēad	budon	boden
singan	sang	sungon	sungen

The personal endings of the preterit indicative of strong verbs are as follows:

Sing. 1 --	
2 - e	Plur 1, 2, 3 -on
3 --	

The conjugation of the preterit indicative of drifan and singan is as follows:

Sing. 1 (iċ) drāf, 'I drove'	Plur. 1 (wē) drifon, 'we drove'
2 (ðū) drife, 'thou drovest'	2 (gē) drifon, 'you drove'
3 (hē) drāf, 'he drove'	3 (hīe) drifon, 'they drove'
Sing. 1 (iċ) sang, 'I sang'	Plur. 1 (wē) sungon, 'we sang'
2 (ðū) sunge, 'thou sangest'	2 (gē) sungon, 'you sang'
3 (hē) sang, 'he sang'	3 (hīe) sungon, 'they sang'

1.2 Scope. This paper proposes to deal with an analysis and description of the phonology of Old English. Since the complete and detailed explanation for the sound changes and vowel shiftings occurring in the Old English period is a task of great magnitude, its contents are limited to studying the sound changes relevant to the principal parts of the strong verbs through the theory of generative phonology. Some rules will be worked out so as to transform the phonological deep structure into the phonetic surface structure of the Old English strong verbs. Old English has been regarded as a dead language, so the only material available is a corpus of written utterances.

1.3 A Reclassification of the Old English Strong Verbs. The Old English strong verbs are traditionally classified into seven classes according to the historical considerations of original ablaut variation and reduplication. However, disregarding the strictly historical criterion of classification and using synchronic features as criteria, Levin (1964) proposes a much more adequate and simple system of strong verb classification. He reclassifies them according to the particular distribution of resonants and consonants in the original root structure, and ablaut alternation.

The new classification, like the old, comprises seven classes. The criterion for class assignment is the vocalism of the preterit. The reclassification Levin (1964:159) proposes is listed as follows:

1a	ī	ā	i	i	bīdan	bād	bidon	biden	'await'
b	ēo	ā	i	i	wrēon	wrāh	wrigon	wrigen	'cover'
2a	ēo	ēa	u	o	bēodan	bēad	budon	boden	'command'
b	ū	ēa	u	o	brūcan	brēac	brucon	brocen	'use'
3a	i	a	u	u	bindan	band	bundon	bunden	'bind'
b	e	ea	u	o	helpan	healp	hulpon	holpen	'help'

The Old English Strong Verbs and Sound Changes Relevant to Them

c	eo	ea	u	o	weorpan	wearp	wurpon	worpen	'throw'
d	u	ea	u	o	spurnan	spearn	spurnon	spronon	'spurn'
e	e	æ	u	o	stregdan	strægd	strugdon	strogden	'strew'
4a	e	æ	ǣ	o	beran	bær	bǣdon	boren	'bear'
b	e	æ	ǣ	e	metan	mæt	mǣton	meten	'measure'
c	ēo	ea	ǣ	e	sēon	seah	sǣgon	segen	'see'
d	i	æ	ǣ	e	biddan	bæd	bǣron	beden	'pray'
5a	a	ō	ō	a	faran	fōr	fōron	faren	'go'
b	ēa	ō	ō	a	slēan	slōg	slōgon	slagen	'strike'
c	e	ō	ō	a	hebban	hōf	hōfon	hafen	'raise'
d	ie	ō	ō	ea	scieppan	scōp	scōpon	sceapen	'create'
e	æ	ō	ō	æ	stæppan	stōp	stōpon	stæpen	'step'
f	u	ō	ō	u	cuman	cōm	cōmon	cumen	'come'
g	i	ō	ō	u	niman	nōm	nōmon	numen	'take'
6a	ā	ē	ē	ā	hātan	hēt	hēton	hāten	'call'
b	ǣ	ē	ē	ǣ	lǣtan	lēt	lēton	lǣtan	'let'
c	ō	ē	ē	a	fōn	fēng	fēngon	fangen	'seize'
7a	a	ēo	ēo	a	bannan	bēonn	bēonnon	bannen	'summon'
b	ea	ēo	ēo	ea	fealdan	fēold	fēoldon	fealden	'fold'
c	ā	ēo	ēo	ā	blāwan	blēow	blēowon	blāwen	'blow'
d	ēa	ēo	ēo	ēa	bēatan	bēot	bēoton	bēaten	'beat'
e	ō	ēo	ēo	ō	blōtan	blēot	blēoton	blōten	'sacrifice'

By this criterion, the system falls into two divisions: in the first (1-4) the vowel of the preterit is different in the singular and the plural; in the second (5-7) it is the same. The vowels of the preterit, for the revised classes, are shown in the following: (The forms strægd, strugdon of 3e, and seah, sǣgon of 4c fall outside this scheme.)

1	ā	i	5	ō	ō
2	ēa	u	6	ē	ē
3	a/ea	u	7	ēo	ēo
4	æ	æ			

The Old English strong verbs in this paper is based on Levin's reclassification system. Levin (1964:161) assumes

The use of vowel gradation as the primary criterion, with root structure a subsidiary marker, greatly simplifies the system. By modifying the role of root structure as a class index, and by abandoning reduplica-

tion altogether, we achieve classes much more uniformly differentiated. There is little motivation, aside from diachronic considerations, for separating beran and metan, cuman and faran, verbs with such similar vocalism in their paradigms; at this point the traditional classification is overdifferentiated. On the other hand, only their common origin as reduplicatives could justify grouping in one class verbs with such different vocalism as hatan, het and blotan, blēot; this is a clear case of underdifferentiation. The reclassification, by disregarding historical differences and focusing on synchronic evidence, presents a system of Old English strong verbs which is properly motivated; the result is neater and more adequate than the traditional scheme.

2. SOUND CHANGES

2.1 Consonants. Most of the consonant changes concerning the Old English strong verbs can be described as follows:

(1) Grimm's Law

Grimm's law is an explanation of the changes occurring between consonants in the early Indo-European languages and the Teutonic or Germanic languages. It demonstrates that the Indo-European voiced aspirates, bh, dh, gh become respectively Germanic b, ð, g and later, in initial position at least, b, d, g. Then the Indo-European voiceless p, t, k, become respectively the voiceless spirants f, θ, x (later h in initial position) except when preceded by s. Finally, the voiced stops b, d, g become respectively the voiceless stops p, t, k.

$$\text{a. Grimm's Law I: } \begin{bmatrix} \text{-cont} \\ \text{+asp} \\ \text{+voice} \end{bmatrix} \longrightarrow \begin{bmatrix} \text{+cont} \\ \text{+voice} \end{bmatrix}$$

$$\text{b. Grimm's Law II: } \begin{bmatrix} \text{-cont} \\ \text{-voice} \end{bmatrix} \longrightarrow \begin{bmatrix} \text{+cont} \\ \text{+voice} \end{bmatrix} / \left\{ \begin{array}{l} \# \\ \text{[+voice]} \end{array} \right\} \text{---}$$

$$\text{c. Grimm's Law III: } \begin{bmatrix} \text{-cont} \\ \text{+voice} \end{bmatrix} \longrightarrow \text{[-voice]}$$

$$\text{d. Grimm's Law IV: } \begin{bmatrix} \text{+cont} \\ \text{+voice} \end{bmatrix} \longrightarrow \text{[-cont]}$$

(2) Verner's Law

In 1874, Karl Verner gave an explanation of certain exceptions to Grimm's

The Old English Strong Verbs and Sound Changes Relevant to Them

Law. The Law states that Germanic voiceless spirants remained voiceless if the preceding syllable had the Indo-European accent, but became voiced in voiced surroundings if the preceding syllable had been unstressed in Indo-European times. For example, in Old English, the singular of the preterit tense of cweθan 'to stay' is ic cwaeθ, but the plural is we cwāēdon. Originally the accent was on the ending in the latter form, as in the past participle, cweden, where a d is also found. These interchanges between voiceless and voiced spirants often denote distinctions between different grammatical forms of the same root. The phenomenon is known as grammatical change which is responsible for the consonantal shifts in the last two principal parts of the Old English strong verbs.

- a. Verner's Law I: $[+cont] \longrightarrow [+voice] \quad / \quad \left[\begin{array}{l} V \\ -stress \end{array} \right] \text{---} [+voice]$
- b. Verner's Law II: $[+cont] \longrightarrow [+voice] \quad / \quad \left[\begin{array}{l} \text{-----} \\ \{ +past part \\ +past plural \} \end{array} \right]$

(3) Rhotacism

The shift from intervocalic voiced /z/ to /r/ is characteristic of both Latin and most of the Germanic languages.

(4) Intervocalic consonantal voicing

A consonant is voiced when it occurs between two vowels.

(5) Consonant doubling

All single consonants are doubled after a short vowel before a following j. This j is generally dropped in Old English.

$$\begin{bmatrix} +\text{cons} \\ \alpha \end{bmatrix} \rightarrow \begin{bmatrix} +\text{cons} \\ \alpha \end{bmatrix} \quad \begin{bmatrix} +\text{cons} \\ \alpha \end{bmatrix} \quad / \quad \begin{bmatrix} +\text{syl} \\ -\text{cons} \\ -\text{long} \end{bmatrix} \rightarrow \begin{bmatrix} -\text{cons} \\ -\text{syl} \\ -\text{back} \\ +\text{high} \end{bmatrix}$$

where α = feature environment of [+cons]

(6) Loss of consonants

(a) Loss of intervocalis χ (h)

Medial χ (h) disappears between vowels.

$$\chi \longrightarrow \phi \quad / \quad \begin{bmatrix} +\text{syl} \\ -\text{cons} \end{bmatrix} \text{ ——— } \begin{bmatrix} +\text{syl} \\ -\text{cons} \end{bmatrix}$$

(b) Loss of the phoneme /j/

Germanic medial j disappears after syllables which become long by the West Germanic gemination of consonants.

$$/j/ \longrightarrow \phi \quad / \quad \begin{bmatrix} +\text{cons} \\ \alpha \end{bmatrix} \quad \begin{bmatrix} +\text{cons} \\ \alpha \end{bmatrix} \text{ ——— }$$

(7) /bb/ alternates with /f/

The phoneme /b/ contrasts with /f/ only in initial position. In medial and final positions except after nasals only /f/ occurs, after nasals only /b/.

/bb/ \longrightarrow /f/ in medial or final position.

(8) Extension of Verner's Law

For Old English, the following interchanging pairs of consonants due to Verner's Law are listed:

- a.h or loss of h (=prim. Germ. x)—g
 - b.h or loss of h (=prim. Germ. xw)—g,w(=prim. Germ. gw)
 - c.h or loss of h (=prim. Germ. η x)—ng. (Only used in the sound changes of some contracted verbs.
- } the same as Verner's Law

(9) Identical consonant reduction

$$\begin{bmatrix} +\text{cons} \\ \alpha_1 \end{bmatrix} \quad \begin{bmatrix} +\text{cons} \\ \alpha_2 \end{bmatrix} + \begin{bmatrix} +\text{syl} \\ -\text{cons} \end{bmatrix} \begin{bmatrix} +\text{con} \\ +\text{cor} \\ +\text{nasal} \end{bmatrix} \rightarrow \begin{bmatrix} +\text{cons} \\ \alpha_1 \end{bmatrix} + \begin{bmatrix} +\text{syl} \\ -\text{cons} \end{bmatrix} \begin{bmatrix} +\text{cons} \\ +\text{cor} \\ +\text{nasal} \end{bmatrix}$$

where $\alpha_1 = \alpha_2$, + = stem boundary

(10) $l\theta$ (West Gmc.) becomes ld (OE).

In West Gmc. medial $l\theta$ becomes ld , and final $l\theta$ becomes replaced in OE by ld from inflected forms.

2.2 Practical applications. The infinitive inflection in Old English is marked uniformly by -an affixed to the nonpast root form. The root syllables of the strong verbs experience vowel mutation in the preterit tense, and often shift their vowels even in the present tense. The strong verbs form their past participle in -en. The derivations of each infinitive form concerning the consonant changes listed in the Levin reclassification chart can be stated by the above-mentioned rules.

1b. wrēon 'cover', derived from wrihan (Goth)

Inf.	UR (Underlying representation)	wrih + an
	Breaking	wrēoh + an
	Loss of /h/	wrēo + an
	Vowel contraction	wrēon
	SR (Surface representation)	wrēon
Ist Pret.	UR	wrVh + an
	Inf. suffix deletion	wrVh
	SR	wrVh (=wrāh)
2nd Pret.	UR	wrVh + on
	Verner's Law II	wrVg + on
	SR	wrVgon (=wrigon)
Past Ptc.	UR	wrVh + en
	Verner's Law II	wrVg + on
	SR	wrVgen (=wrigen)

4c. sēon 'see', derived from sehan (OHG)

Inf.	UR	seh+an	1st Pret.	UR	sVh+an
	Breaking	seoh+an		Inf. suffix deletion	sVh
	Loss of /h/	seo+an		SR	sVh (=seah)
	Vowel contraction	sēon			
	SR	sēon			
2nd Pret.	UR	sVh+on	Past Ptc.	UR	sVh+en
	Verner's Law II	sVg+on		Verner's Law II	sVg+en
	SR	sVgon (=sāegon)		SR	sVgen (=segen)

5b. slēan 'strike', derived from slæhan (Goth)

Inf. UR	Slæh+an	
Breaking	sleah+an	
Loss of /h/	slea+an	
Vowel contraction	slēan	
SR	slēan	
1st Pret. UR	slVh+an	
Inf. suffix deletion	slVh	
Verner's Law I	slVg	
Grimm's IV	slVg	
SR	slVg (=slōg)	
		slōh is another pret. form of the verb.
2nd Pret. UR	slVh+on	
Verner's II	slVg+on	
SR	slVgon (=slōgon)	
Past Ptc. UR	slVh+en	
Verner's II	slVg+en	
SR	slVgen (=slagen)	

From the above three examples, it stands to reason that a verb with internal g frequently has -h in the preterit singular.

5c. hebban 'raise', derived from hafjan (Goth)

Inf. UR	hafj+an	
i-umlaut	hafj+an	
Verner's Law I	hebj+an	
Consonant doubling	hebbj+an	
Loss of /j/	hebb+an	
Grimm's Law IV	hebb+an	
SR	hebban	
Ist Pret. UR		hVbb+an
Inf. suffix deletion		hVbb
/bb/ alternates with /f/		hVf (=hōf)
2nd Pret. UR		hVbb+on
/bb/ alternates with /f/		hVf+on
SR		hVfon
Past Ptc. UR		hVbb+en (=hōfen)
/bb/ alternates with /f/		hVf+en
SR		hVfen (=hafen)

6c. fōn 'seize', derived from fanzan (Prim. Germ.)

The Old English Strong Verbs and Sound Changes Relevant to Them

Inf. UR	faŋx+an
Loss of /x/	fa+an
Vowel contraction	fān
Back vowel raising	fōn
1st Pret. UR	fVŋx+an
Inf. suffix deletion	fVŋx
Extention of Verner's Law	fVng
SR	fVng (=fēng)
2nd Pret. UR	fVŋx+on
Extention of Verner's Law	fVng+on
SR	fVngon (=fēngon)
Past Ptc. UR	fVŋx+en
Extention of Verner's Law	fVng+en
SR	fVngen (=fangen)

7b. fealdan 'fold', derived from falθan (Goth)

Inf. UR	falθ+an
Breaking	fealθ+an
lθ becomes ld	feald+an
SR	fealdan

In order to account for other phonological rules, the verbs like sniðan 'cut' and ċēosan 'choose' are cited as examples.

	Inf.	1st Pret.	2nd Pret.	Past Ptc.
UR	snVt+an	snVt	snVt+on	snVt+en
Grimm's Law II	snVθ+an	snVθ	snVθ+on	snVθ+en
Verner's Law I	---	---	snVð+on	snVð+en
Grimm's IV	---	---	snVd+on	snVd+en
Intervocalic voicing	snVð+an	---	---	---
SR	snVðan (=sniðan)	snVθ (=snāθ)	snVdon (=snidon)	snVden (=sniden)
	Inf	1st Pret.	2nd Pret.	Past Ptc.
UR	ċVs+an	ċVas	cVs+on	cVs+en
Verner's Law I	---	---	cVz+on	cVz+en
Rhotacism	---	---	cVr+on	cVr+en
SR	ċVsan (=ċeosan)	ċVas (=ċēas)	cVron (=curon)	cVren (=coren)

It is worth noting that Verner's Law forms occur in the following verbs, similar to the sound changes above.

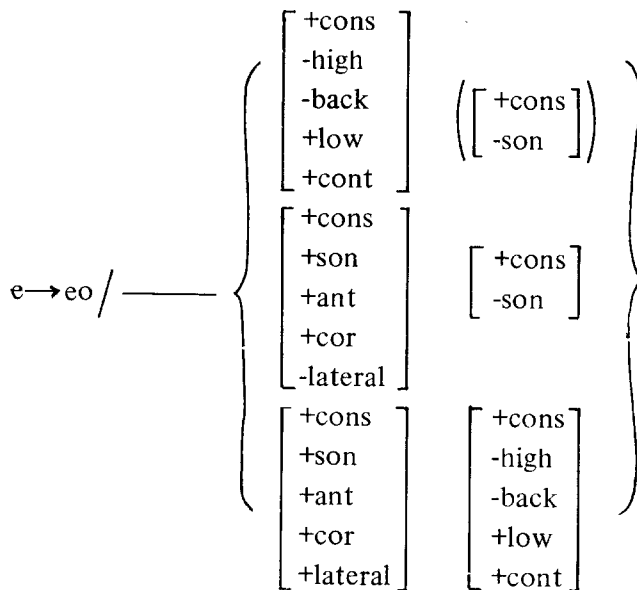

līan 'go', drēosan 'fall', frēosan 'freeze', hrēosan 'fall',
 lēosan 'lose', sēoθan 'boil', weorθan 'become',
 fēolan 'press on', cweθan 'say', lēon 'lend',
 tēon 'accuse', wrēon 'cover', flēon 'flee', lēan 'blame',
 slēan 'strike', sēon 'see', fōn 'seize', hōn 'hang'

There are a number of exceptions to Verner's Law -- the following verbs without Verner's Law forms where they might be excepted.

rīsan 'rise', mīθan 'avoid', wriēθan 'to twist', ābrēoθan 'to ruin'

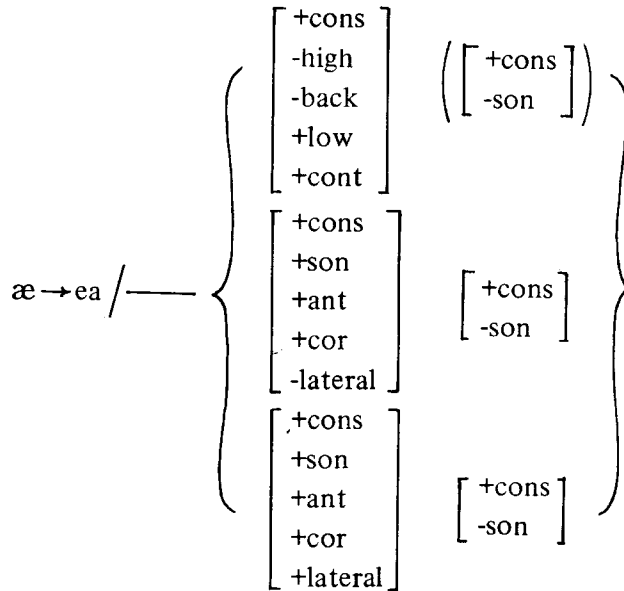

2.3 Vowels. To understand the variations in the strong verbs, we need to know something about certain vowel sound changes occurring within the Old English period. I propose to display some alternations and provide an explanation for the variations.

- (1) Breaking: the diphthongization of a front vowel
 a. before h, h+cons., lh

The Old English Strong Verbs and Sound Changes Relevant to Them

b before h, h+cons., r+cons. l+cons

c. before h and h+cons

- (2) Vowel contraction: Loss of /h/ and compensatory lengthening vowel contraction took place in OE when intervocalic h had disappeared. A long vowel or a long diphthong absorbed a following short vowel.

(3) Vowel-height assimilation

A process of height assimilation takes place between the second (non-syllabic) element of the diphthong and the first.

$$\begin{bmatrix} -\text{cons} \\ +\text{syl} \end{bmatrix} \longrightarrow [\alpha \text{ high}] \quad / \quad \begin{bmatrix} -\text{cons} \\ -\text{syl} \\ \alpha \text{ high} \end{bmatrix}$$

(4) The vocalization of semivowels

Semivowels are vocalized in certain contexts.

$$\begin{bmatrix} -\text{cons} \\ -\text{syl} \end{bmatrix} \longrightarrow \begin{bmatrix} -\text{cons} \\ +\text{syl} \end{bmatrix} \quad / \quad \begin{bmatrix} +\text{cons} \\ -\text{son} \end{bmatrix} \left(\begin{bmatrix} -\text{con} \\ +\text{syl} \end{bmatrix} \right) \longrightarrow \begin{bmatrix} +\text{cons} \\ -\text{son} \end{bmatrix}$$

(5) Lengthening

Vowels are lengthened by the elimination of semivowels.

$$\begin{bmatrix} -\text{cons} \\ +\text{syl} \end{bmatrix} \quad \begin{bmatrix} -\text{cons} \\ -\text{syl} \end{bmatrix} \longrightarrow \begin{bmatrix} -\text{cons} \\ +\text{syl} \\ +\text{long} \end{bmatrix}$$

(6) High vowel-lowering

The high vowels are lowered one degree of middle if followed by a consonant except nasals, and a vowel.

$$\begin{bmatrix} -\text{cons} \\ +\text{syl} \\ +\text{high} \end{bmatrix} \longrightarrow \begin{bmatrix} -\text{cons} \\ +\text{syl} \\ -\text{high} \\ -\text{low} \end{bmatrix} \quad / \quad \begin{bmatrix} +\text{cons} \\ -\text{son} \end{bmatrix} \quad \begin{bmatrix} -\text{cons} \\ +\text{syl} \end{bmatrix}$$

(7) Fronting

By this rule, low back vowels are moved to a low front position.

$$\begin{bmatrix} -\text{cons} \\ +\text{syl} \\ +\text{back} \\ +\text{low} \end{bmatrix} \longrightarrow [-\text{back}]$$

The Old English Strong Verbs and Sound Changes Relevant to Them

(8) i → ew / _____ w

(9) l > ul, r > ur, m > um, n > un, l > lu, r > ru, m > mu, n > nu

This rule means in Old English a liquid may become the vowel u immediately followed by a liquid, or a liquid followed by u.¹

(10) I-umlaut (front mutation)

The term 'umlaut' in Modern English derives from the German um meaning 'about' and laut, signifying 'sound'. I-umlaut is a change in quality of an accented vowel by an i or j (=y) in the following syllable.

(11) Palatal diphthongization

If ġ, ċ, or ſċ precedes the front vowels e, æ or ǣ, a glide develops between the consonant and the vowel which then coalesces with the original vowel to form the diphthongs ie, ea and ĕa respectively.

$$\begin{bmatrix} -\text{cons} \\ +\text{syl} \\ -\text{back} \end{bmatrix} \longrightarrow \begin{bmatrix} -\text{cons} \\ -\text{syl} \end{bmatrix} \quad \begin{bmatrix} -\text{cons} \\ +\text{syl} \\ -\text{back} \end{bmatrix} / \begin{bmatrix} -\text{son} \\ -\text{ant} \end{bmatrix} \text{---}$$

(12) Restoration of a

æ becomes a if followed by a single consonant and a back vowel.

$$\begin{bmatrix} -\text{cons} \\ +\text{syl} \\ -\text{back} \\ +\text{low} \end{bmatrix} \longrightarrow [+back] / \text{---} \begin{bmatrix} +\text{cons} \\ -\text{son} \end{bmatrix} \quad \begin{bmatrix} -\text{cons} \\ +\text{syl} \\ +\text{back} \end{bmatrix}$$

(13) $e > \bar{a}e$, $a > \bar{o}$

$$\begin{bmatrix} -\text{cons} \\ +\text{syl} \\ \alpha \text{ low} \\ \alpha \text{ back} \\ -\text{high} \\ -\text{round} \end{bmatrix} \longrightarrow \begin{bmatrix} \beta \text{ low} \\ \alpha \text{ round} \\ +\text{long} \end{bmatrix} / \text{---} \begin{bmatrix} \beta \text{ son} \\ +\text{cons} \end{bmatrix}$$

(14) Nasal-raising: Mid vowels are raised to the height position by the influence of nasals.

$$\begin{bmatrix} -\text{cons} \\ +\text{syl} \\ -\text{high} \\ -\text{low} \end{bmatrix} \longrightarrow [+high] / \text{---} \begin{bmatrix} +\text{cons} \\ +\text{son} \\ +\text{nasal} \end{bmatrix}$$

(15) Front vowel raising

$$\begin{bmatrix} -\text{cons} \\ +\text{syl} \\ +\text{low} \\ +\text{long} \\ -\text{back} \end{bmatrix} \longrightarrow [-low]$$

(16) Back vowel raising

$$\begin{bmatrix} -\text{cons} \\ +\text{syl} \\ +\text{low} \\ +\text{back} \\ +\text{long} \end{bmatrix} \longrightarrow \begin{bmatrix} -\text{low} \\ +\text{round} \end{bmatrix}$$

(17) $\bar{a}e$ becomes \bar{a} before /w/

2.4 Practical applications. Based on the languages such as Gothic, a phonological motivation for the root vowel preceding the Inf. Pret, Part-forming suffixes can be postulated. The following table abstracted from Wright (1914:28) contains the normal development of the vowel-system in Goth. and OE. root-syllables:

P. Germ.	a	e	i	o	u	\bar{a}	$\bar{a}e$	\bar{e}	\bar{i}	\bar{o}	\bar{u}	ai	au	eu	iu
Goth	a	i	i	u	u	\bar{a}	\bar{e}	\bar{e}	ei	\bar{o}	\bar{u}	ái	áu	iu	iu
OE	$\bar{a}e$	e	i	o	u	\bar{o}	$\bar{a}e$	\bar{e}	\bar{i}	\bar{o}	\bar{u}	\bar{a}	\bar{ea}	\bar{eo}	\bar{io}

For the purpose of dealing with the ablaut variations of Old English strong verbs, their underlying and surface representations, and their Gothic cognates are provided.

	Inf.	1st Pret.	2nd Pret.	Past Ptc.
